1

Presentation Overview

Context and Purpose
Requirements
Constraints
Risks
Risk Mitigation
Viability of the Project
Solution Path

2019-10-17

2

2

Why?

3

Context & Purpose

Increasing **machine learning** and **drone** applications

No existing combination of FPGA + ML + drone on the market

2019-10-17

4

4

Context & Purpose

Want to combine all of them → **computing platform**

Accelerate ML using FPGA

FPGA on deployed on the drone

Communicate with ground station

Detect pedestrians from above

For client's research in ML

2019-10-17

5

5

6

Requirements & Constraints

Requirements

Integrated Drone Requirements

- Capable of flying with the computing platform
- Flight duration at least 10 minutes
- Remote controlled by the pilot
- FPGA hardware acceleration

2019-10-17

8

8

7

Requirements

Drone Legal Requirements

- Operation is compliant with *Transport Canada*
- Tests inside YVR controlled airspace is permitted

2019-10-17

9

Requirements

Data Transmission Requirements

- Data processed on the drone transmitted to ground station
- Ground station receives and display data to the operator
- Transmission via WiFi (2.4GHz or 5.2GHz)

Machine Learning Requirements

- Machine learning model fits on FPGA
- Model detects pedestrians and outputs bounding boxes

2019-10-17

10

Requirements

Data Transmission Requirements

- Data processed on the drone transmitted to ground station
- Ground station receives and display data to the operator
- Transmission via WiFi (2.4GHz or 5.2GHz)

Machine Learning Requirements

- Machine learning model fits on FPGA
- Model detects pedestrians and outputs bounding boxes

2019-10-17

11

Constraints

Time & Budget

Limited to C\$1,000
Limited time to perform 2 sub-projects
Coordination and leadership is challenging

Future-Proofing

FPGA big enough for future ML models

Power & Weight

Battery power is limited
Weight and power draw affects flight duration
Portability

Data Transmission

Limited bandwidth for data
Limited power emission
Limited range

2019-10-17

12

12

Risks?

13

Risks

Hardware

Flight crashes
Loss of FPGA
Loss of drone

Management

Insufficient commitment
Poor task management
Poor decision making

Legacy

Low reparability /
maintainability
Client doesn't know
how to operate

Software

Tech. debt
Inadequate
documentation

2019-10-17

14

14

Risk Management

We keep track of an updated copy of the **risk profile**

Active mitigation on risks with index ≥ 0.4

Triage tasks to mitigate risk

Weekly update on risk status

Active monitoring on risks with index < 0.4

2019-10-17

15

15

Risk Management

Hardware

- Follow safety protocol

Management

- Weekly updates and status report on assigned tasks
- Timeline closely tracked

Legacy

- Actively updating all documents alongside changes

Software

- Version tracking
- Code review

2019-10-17

16

16

Viable?

17

Viability

Assess system feasibility on 3 objectives:

1

Integration of FPGA with
a Drone

2

Air-to-Ground Data
Transmission

3

ML Implementation on
FPGA

2019-10-17

18

18

Viability

All three objectives individually has existing solutions

1

Integration of FPGA with a
Drone

Aerotenna FPGA
flight controller

2

Air-to-Ground Data
Transmission

DJI DATALINK

3

ML Implementation
on FPGA

SymbioticEDA
MARLANN

2019-10-17

19

19

Viability

Combination of the three will further this field of research

This project is a **proof-of-concept**

2019-10-17

21

21

Solution?

22

Deliverables

1x

1x

1x

5x

2019-10-17

23

23

Deliverable Dates

2019-10-17

24

24

Immediate Steps

Start **Small**

- Function over scale
- Integrate existing model

Start **Quickly**

- Create purchasing plans
- Tool setup takes time

Start **Legally**

- Drone registration
- Pilot and radio certifications

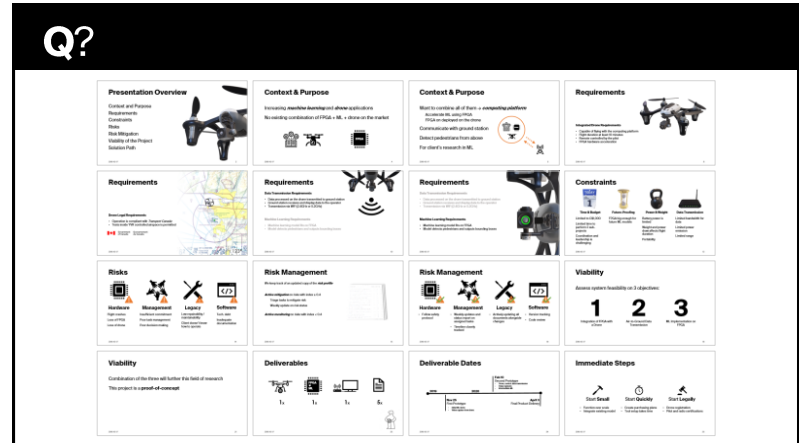

2019-10-17

25

25

Q?

26

27

Thanks For Listening: Milestone I Presentation

FPGA for Machine Learning on a Drone
